

ELECTRONIC JIGGING FISHING REEL - BJ5000

Productive, intelligent and easy to operate

Description

The electronic jigging fishing reel BJ5000 (Belitronic) is an intelligent reel which reproduces automatically fishing movements. Several fishing programs are pre-defined, you just have to enter some parameters and you are ready to fish.

The jigger detects the resistance on the line when fish are hooked and automatically haul them up. With heavier fish, the reel will render the line out to tire the fish and haul it.

Your fishing efficiency will improve as the line is always in or out the water.

Main fonctions

- Used manually or automatically.
- 5 programs: normal fishing (standard), step fishing, bottom fishing, bottom step fishing, mackerel fishing.
- Control of speed, brake, clutch, pulling power, pause, depth, fish alarm, etc.
